DETAILED ACTION

Allowable Subject Matter

1. Claim 1 is allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach an improved memory utilization sequence for a set-top box for processing audio/video signals of the type having a DTV board subject to reset and out-of-reset commands and having a non-volatile memory associated therewith for storing values including a power-state variable having at least an ON state and an OFF state and having a microprocessor controlled by an operating sequence, and at least one other board having a register for storing user inputted commands including a 'power-up' command and devices thereon for placing the DTV board into reset and for taking the DTV board out of reset, characterized by the steps of: taking the DTV board out of reset upon application of power to the set-top box; starting execution of a boot-up sequence including the querying the power-state variable in the non-volatile memory associated with the DTV board; and if the power-state variable is ON, continuing execution of the boot-up sequence including setting of the power-state variable to ON, or if the power-state variable is OFF, querying the register for a 'power-up' value; and if the power-up value is present, continuing execution of the boot-up sequence including setting of the power-state variable to ON; or if the power-up value is not present, commanding the DTV board to its reset state until a power-on command is detected upon which the DTV is taken out of its reset state as cited in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Drews (US Patent 6,463,535 b1) and O'Donnell et al. (US Patent 6,587,947 B1) disclose set top boxes related to boot up sequences with different approaches.
